

ELECTRONIC MEASUREMENT TRAINING SET

The Electronic Measurement Training Set features ready modules designed to allow the user to practically run applications during experiments. It comes in a case and is suitable for desktop use. Connection is established with 2mm titanium/gold-alloy-plated female metal sockets. The Electronic Measurement Training Set has been designed to provide training for a better understanding of the theory behind measurements in electronic circuits and systems as well as for enabling the users to better interpret the measured values.

TRAINING SET

FEATURES

- TTL Oscillator (with stages)
- Constant DC Power Supply
- Adjustable Symmetrical AC Power Supply
- Adjustable DC Power Supply
- Potentiometer Applications
- Digital DC Ammeter
- Digital DC Voltmeter
- Analog DC Ammeter
- Analog DC Voltmeter
- Signal Generator
