

SPLIT AIRCONDITIONER TRAINING SET

Split Air Conditioning Training Set is designed to provide training for possible malfunctions, understanding for the structure and operation of the split air conditioner. All elements that have been used in the training set are in the same structure as an industrial life. Virtual failures can be given during training. The training set can be controlled via computer and the measured data can be monitored via the software provided with the set. Electrical safety is ensured. The platform on which the experiment set is located is made of durable materials. The panel is located on mobile caster.

TRAINING SET

TRAINING SET EQUIPMENT

- Supply Voltage: 220V - 240V AC, 50/60Hz
- Low and high pressure indicators
- Touch Screen
- Start – Stop - Emergency stop buttons
- Leakage current and fuse protection
- The structure shows the split air – conditioning system
- The transparent Plexiglas shows mechanism of the air – conditioning system.
- 15pcs simulation failure buttons are occurred in air – conditioning system
- Digital measurement indicators
- Condenser, Environment, Evaporator
- Analog measurement indicators
- Double colored LED system shows the normal operating or failure status of the set.
- Led system shows which products are detected on the set.
- Block scheme of low and high manometer air – conditioning systems on the panel
