

AIRCRAFT FIRE TRAINING SET

Aircraft fire detection and extinguishing training set is designed to provide training for the fire detection and extinguishing system of an aircraft, containing optimum components. By using this set, students learn the function of each and every component and form a more logical and systematic approach for troubleshooting. The set contains all fixings and components of an aircraft fire detection system. To provide a clear view from all angles, the model is mounted on a portable stand.

**TRAINING SET****TRAINING SET EQUIPMENT**

- All accessories of the training set are in accordance with European Aviation Safety Agency (EASA) or USA Federal Aviation Administration (FAA) standards.
- Control unit
- Loop detector, fenwal spot detector, infrared or UV sensor, smoke detection system
- Alarm system
- Resetable discharge indicator
- Continuous loop temperature sensor and control box
- Electromech protected and unprotected switches and lights
- Siren silencing relay switch used in large vehicles
- All electric cables marked with ATA codes corresponding to provided electrical diagram schemes
- "Press to test" illuminated switch to reset the system after discharge
- Protected "fire extinguisher discharge" illuminated switch
