

# AIRCRAFT LANDING GEAR TRAINING SET

Aircraft landing gear training set is designed to provide training for landing gear system of an aircraft, containing optimum components. By using this set, students learn the function of each and every component and form a more logical and systematic approach for troubleshooting. The set contains all fixings and components of a standard hydraulic driven landing gear system. To provide a clear view from all angles, the model is mounted on a portable stand.

**TRAINING SET****TRAINING SET EQUIPMENT**

- All accessories of the training set in accordance with European Aviation Safety Agency (EASA) and USA Federal Aviation Administration (FAA) standards
- Electric driven hydraulic pump
- Relief valves, filter, fluid reservoir, actuator cylinder
- Genuine aerofoil cut view
- Hydraulic driving flap with electric gauge system
- All components regarding electric motor and mechanical pump
- Emergency hand pump
- Accumulator
- Electrostatic application of powdered paint on the system frame for durability
- Swivel castor for full motion and secure positioning
- Actuator cylinder, control handle, flap position indicator
- Door actuator, sequence valve
- Hydraulic driven L/G and landing gear lid
- Typical hydraulic system performance and landing gear performance
- Mechanic and electric flap and landing gear control
